

DJI AIR 2S

Specifications-

1-inch CMOS Sensor

MasterShots

5.4K Video

12km FHD
Transmission

Obstacle Sensing
in 4 Directions

ADS-B

Turn On the Night

Capture the allure of the world, even as it darkens. Thanks to a high dynamic range, high resolution, and accurate color reproduction, even low-light scenes are sharp and vibrant.

Intelligent HDR technology merges multiple shots automatically, increasing the dynamic range of images without the need for post-processing. That means more nuanced details in both the highlights and shadows for richer images with greater depth.

Shoot RAW format photos with a dynamic range of up to 12.6 stops to capture more visual information in every scene, even when lighting conditions are bad or complex. This provides more flexibility in post-processing, giving creators more possibilities to get the look they want.

Hyperlapse and Panorama

Speed up time and movement with a single tap by creating a striking hyperlapse. You can also capture larger, more detailed shots of your surroundings with panorama.

Introducing MasterShots

The next evolution of QuickShots, MasterShots is an advanced intelligent feature that gives users the best shots in any location with just a tap. Simply select your subject, and the drone will film while executing ten different maneuvers in sequence, keeping your subject center-frame and generating a short cinematic video afterward.

The Center of Attention

FocusTrack features Spotlight 2.0, ActiveTrack 4.0, and Point of Interest 3.0, making it a breeze for DJI Air 2S to follow or circle your subject.
