Improvement Over Previous Generation

The new battery charging hub supports an innovative power transfer function. Simply press and hold the function button to transfer the remaining power from multiple batteries to the battery with the highest remaining power, giving you a more fully charged battery in situations where charging options are limited.

# Omnidirectional

## Obstacle Sensing

An omnidirectional sensing system enables comprehensive environmental awareness, allowing Air 3 to detect obstacles in all directions. When obstacles are detected, Air 3 can use APAS 5.0 to perform smoother avoidance movements for a safer overall flight experience. Even complete beginners can now fly with confidence and execute creative ideas with enhanced safety.

# Advanced RTH

During Smart RTH, Air 3 will automatically plan an optimized flight route for Advanced RTH, while maintaining omnidirectional obstacle sensing to return to its home point quickly and safely.

# Intelligent Features

## to Fly Inspired

Get even more creativity in your shots when you use Air 3's ActiveShots 360°. When paired with the omnidirectional vision sensing system and 3x medium tele camera, it helps you to capture cinematic footage that keeps your subject in frame. In Manual mode, you can customize the flight path while still enjoying simple and intuitive control. Draw your flight path on the Manual wheel, and Air 3 will carry out orbiting, approaching, and distancing maneuvers with your subject centered.

In Auto mode, Air 3 can continuously plan and adjust the flight path based on its environment and execute automatic movements like Circle, Dronie, Hold, and Helix. Whether you're running, biking, or skateboarding, with a simple tap of the record button, you can become the star of the show.
